Navigator Release Notes

Release Date: December 2, 2019

The following remedies and enhancements are included in the Selection Navigator release dated December 2, 2019. This document is provided as a summary resource to improve your user experience with the *Navigator®* customer portal and the applications contained within the platform.

If, after reviewing this document, you have questions about anything contained within this release, contact the *Navigator* support team at navigatorsupport@hvacnavigator.com or call 844-319-0726.

Selection Navigator

What's New?

BSNA

- Multiple Electrical Budgeting Estimate (EBE) characteristics have been changed from on/off choices to numeric fields instead to provide for more accurate estimates.

Fire Detection Products

- Users may define a default customer service contact in account preferences for populating the "To" fields of an order. The Project Contact role of "customer service", if entered, will override the account preference.

Fixes

BSNA

- Corrected calculations for EBE including overtime rates, shift work percentage, multi-floor drill costs, permit fees, drug testing, underground trenches, lift costs, non-working supervisor costs, subcontractor sell price factor and profit calculation.
- EBE Unit Pricing data is not lost when changing the installation type on the EBE characteristics tab.
- Changing custom tasks on a copied system will not update custom tasks on the original system.
- Shortened documents names by removing the estimate name from the documents. This addresses issues opening Excel files with names that are too long.

Navigator Release Notes

Ducted Systems - Unitary

- New option "High Eff 2-Pipe-R410A" is added to product Identifier for 7.5 Ton for AC and HP unit.
- When a Rawal valve is selected and tonnage is changed, the default selection for the Indoor Unit will change to an appropriate default value.
- Mixed Air calculation is now properly updated any time the model changes.
- Residential Split configurator properly saves the Outdoor unit's "Tons" value when any matchup is selected.
- Corrected issue where the heat pump section and Heat Pump OD Temp was missing from submittal documents for Commercial Packages, Commercial Split and Residential Packages.
- Unit Tag is now properly displayed on reports as entered by user on the Estimate Details product grid.
- ERV Dimensional drawing is now properly included in the submittal document when the option is selected.
- 'Exhaust Air Blower Performance' section is present on Performance Page in Submittal Report for Millennium unit when Power Exhaust option is selected.

Ducted Systems – Applied Rooftops - Premier

- Corrected Summer WB and Winter WB values in the performance specifications.
- Zip codes with leading zeros can now be used for finding a service branch on the PCAT/Startup tab.
- Corrected issue when an ERW with VFD is selected and Supply Airflow and Exhaust Airflow produce an invalid model.
- Model number is now properly updated when Special Quote options are selected.
- Price is properly updated when the touch screen option is selected.
- Currency field is properly displayed when reports are generated from the Reports tab in the product selector.

LET US KNOW WHAT YOU THINK

Do you have any feedback about these remedies and/or enhancements? Are they helpful? Will they improve your experience within Navigator? Please share your comments to help us better understand the needs of our users and continue to improve the tool.
